nevada[®]

10 days of the contest. Cabrillo format is preferred (Information on preparing an entry in Cabrillo format can be found on the HFCC web site) but you can email the results to G3ZBU@hotmail.com and he will act as co-ordinator. Individual entrants may only operate on behalf of HARC!

At the end of the programme in August, the club whose members have made the highest score will receive the G5RV trophy, and the second- and

third-placed societies will be awarded certificates. The individual stations making the top three QSO totals on each mode in the 100W and 10W sections will receive a certificate. The Foundation and Intermediate licensees with the top three highest aggregate scores on each mode will also receive a certificate.

I hope that you found this of interest and that we will make a great success of the 80m club championship!

RSGB 80m Club Championship 2004 MODEY, Helen Watt

The 80m Club Championship is a series of short weekday evening contests on 80m, based around competition between affiliated societies. Individual scores in every event count towards the club's overall score so it's important for everyone to join in as many sessions and as many modes as possible.

Word has it that interest in this event is building – unfortunately we have missed the January lot but that still leaves every month up to July. Each session runs from 20:00 – 21:30 UTC and there are three modes (CW, SSB, Data).

There are two sections: (a) 100W maximum output power, (b) 10W maximum output power, and entrants can change section from one event to another, and stations may be single or multi-operator. You will

want to exchange RS(T) + serial number.

Frequencies:

CW 3.520 - 3.570
(QRS Corral 3.550-3.570);
SSB 3.650-3.750;
Datamodes 3.580-3.600

One point is awarded per contact and an entrant may be contacted once per session. The final score will be normalised to the leading score in the section, with the leading score being awarded 100 points and all other scores expressed in proportion. In the datamodes contests, contact may be on RTTY, PSK31 or PSK63 only. Only one contact per session will count, regardless of which datamode is used.

Each session is a contest in its own right, and log entries must be emailed to the RSGB within

HARC Classified Ads

I purchased the following during the last year or so, but it is clear that I am never going to get around to installing it. Are there any HARC members interested in any of the following :-

Kenwood TR-751E 2m multimode - good condition (£220)

Maspro 8 element Yagi - new and in original packing (£25)

Hy-Gain AR40 rotator - good working order - new bearings (£20)

Mast (2" x 14') complete with T&K brackets - new (£20)

20m of rotator cable and 20m UR67 - new (£20)

Revco VHF/UHF Discone - new (£20)

Or make me a silly (well not too silly) offer for the lot!

Cheers John (G4HUK)
